

## INDUSTRY 4.0

IMPROVE IT! provides a complex overview of manufacturing processes in real time, helps realise paperless management of manufacturing processes and simplifies the process of continuous improvement. The system obtains and evaluates data from manufacturing equipment (CNC, automatic machinery, manual operations) in real time and links it with information from other sources (ERP, APS, WMS, BMS, BI) into one system for management of manufacturing processes. This enables you to monitor priorities in relation to manufacturing contracts, adhere to manufacturing procedures and monitor overall equipment effectiveness (OEE). The system administers recipes, CNC programmes, manufacturing procedures, etc. at one central site.
